INNOFACTOR®

Cloud Governance + DevOps Evangelist

Azure Management Elite + Advisor

IoT & Embedded Microcontroller's

KNX, CBus, Iridium Certified

Agenda

Re-Scaffolding Cloud Fabrics
with Trust

Risks and Realities

Governance
and Compliance

The Approach

Blockers and
Challenges

Cloud Native
Governance

Governance is essentially the activity of defining, continuously monitoring, and auditing the rules, guidelines, policies, and processes that allocate, coordinate and control a given operation's resources and actions. In short, establishing and auditing the application of existing ruling.

Management is the complementary activity of organizing, coordinating and steering the corporate resources and actions in full compliance with defined governance while ensuring the achievement of strategic and operational objectives. In short, making sure objectives are met while assets operate under established rules.

Realities

- Central Cloud Engineering
 - Cloud Custodians
 - Cloud Asset Managers
 - Effectively the **Central IT** for the Cloud era
- Cloud Sprawl
 - Cloud resources rapidly created by team without proper configuration and clear business alignment
 - Reminiscent of early 2000's VM Sprawl

Business Resources

Challenges

- Cost Control
- Risk Mitigation
- Account Structures
- Complicated
- Business Disruption
- Service Availability
- Scale
- Security

Building Blocks

- Vaulted Credentials
- Identity Federation
 - Roles Enablement
- Virtual Networks
 - Peering, Routes, Tunnels
- Security & Logging
 - Process logs
 - Host Security tooling
 - Incident Management
 - Audits

Shared Services

- Networking
 - Express Routes, VPN
- Domain Services
 - DNS
 - LDAP / NTDS / AD
- Bastion Hosts
- Deployment Support
 - Golden Images
- Monitoring
- Automation
- Restricted Access

Team Innovation

Organization Services Isolated
Multi-Tenant
Initiatives / Experimentation
Restrictive Permissions
Full Building Blocks

Learn & Experiment

Organization Services Isolated
Single Tenant
Spend Limits
Full Permissions
Minimal Building Blocks

Sandbox Accounts

Development

Develop and Iterate
Collaboration
Permissive Access
Network: Development

Software Development Life Cycle Accounts

Goals

Automation

Scalability

Self Service

Guardrails

Flexibility

Audit Logs

Steps

- Define tagging strategy
- Define naming strategy
- Define automation strategy
- Scaffold environment foundation
- Establish shared services
- Define governance policies
